DETAILED ACTION

Response To Arguments

Upon further consideration the examiner has concluded that claims 16-21 are drawn to an article, not an apparatus as previously thought. The applicant is attempting to limit the article (claims 16-21) by claiming the method in which the components are placed. This does not structurally limit the claimed article. Thus the examiner has made a three-way restriction between the method, apparatus and article. The applicants arguments drawn the restriction mailed 03/23/05 are now moot because of the newly made restriction requirement.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a method, classified in class 228, subclass 121.
- II. Claim8-15, drawn to an apparatus, classified in class 228, subclass 215.
- III. Claims 16-21, drawn to an article, classified in class 257, subclass 784.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process, like bonding different electronic devices other than integrated circuit dies.

Inventions I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(f)). In this case the product as claimed can be made by another and materially different process such as a wire bonding apparatus.

Inventions II and III are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus

(MPEP § 806.05(g)). In this case the product as claimed can be made by another and materially different apparatus such as wire bonding apparatus.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
